

Cancellation Operations

Current-state workflow, calibration, and operator reference

Working process workbook

Prepared for workflow review
Version 0.6 • Meridian Airlines internal

WORKBOOK CONTENTS

- 01 Journey and request capture
- 02 Eligibility references
- 03 Controls and refund handling
- 04 Calibration and readiness

How to Use This Working Packet

Governing references are interleaved with screens and calibration material. Context pages do not add cancellation rules.

FIND THE SOURCE

- 01 Use the current-process label.
- 02 Follow page references, not file order.
- 03 Treat exercises as non-governing.

CHECK THE STATUS

- 01 Separate observed UI from policy.
- 02 Check dates on working notes.
- 03 Keep historical options in context.

BUILD THE FLOW

- 01 Join the governing process pages.
- 02 Retain negative and default branches.
- 03 Review the complete workflow before use.

WHAT THE OPERATOR IS DOING

- 1

Locate the correct record

Use the reservation identifier. If the customer does not have it, use the customer profile to locate the trip.
- 2

Verify itinerary context

Confirm the displayed traveler and itinerary belong to the request before continuing.
- 3

Continue to reason capture

The lookup screen provides context; it does not determine cancellation eligibility.

Operator screen captured in the rehearsal sandbox; records shown are sandbox fixtures.

REVIEW SEQUENCE

1 Check every segment

Read status across all rows in the itinerary. Do not infer the whole trip from a selected row.

2 Use current status

A flying or landed segment changes the handling path; read the status as it stands right now.

SCREEN CAVEAT

The interface may show status and timestamps, but the operator applies the policy sequence.

Reason-Capture Calibration Notes

These prompts help reviewers compare case wording. They are exercises and do not establish reason categories or outcomes.

LISTENING

- 01 Separate the request from background.
- 02 Retain the customer's own wording.
- 03 Clarify ambiguous chronology.

RECORD QUALITY

- 01 Check that the note is complete.
- 02 Avoid adding an unstated motive.
- 03 Keep examples distinct from guidance.

REVIEW QUESTIONS

- 01 Can another reviewer follow the note?
- 02 Is the request still current?
- 03 Does the record identify open questions?

EXERCISE — NOT POLICY

Reason Capture — Operator Reference

Capture one reason before evaluating eligibility. The reason label is an input to the decision flow; it is not the decision by itself.

STEP	PURPOSE	SYSTEM	SCREEN / FIELD
1. Open reservation	Anchor the request to the correct trip.	Reservation workspace	Lookup / itinerary summary
2. Ask cancellation reason	Record the customer's stated reason before checking conditions.	Customer conversation	Agent dialogue
3. Select reason	Use one of the supported reason categories.	Cancellation workspace	Reason drop-down
4. Continue to eligibility	Evaluate status and allowed conditions in the required order.	Operator procedure	Eligibility checklist

SUPPORTED CANCELLATION REASONS

Change of plans

Covered reason under trip protection

Airline cancelled the flight

Other

OPERATOR NOTE

Do not paraphrase a reason into a different category solely to reach a desired outcome.

OPERATOR CHECKS

- 1 Review original-payment rows**

Refund allocation follows the payment methods used for the original purchase.
- 2 Validate before submit**

Confirm the allocation and only submit after the cancellation eligibility review is complete.

CUSTOMER EXPECTATION

After submission, set the arrival expectation from the ratified refund window.

Eligibility Gate 1 — Segment Status

CHECK BEFORE ALL OTHER CONDITIONS

Eligibility Review

Current gates interleaved with calibration context

Section divider

Current workbook section
Use governing pages for decisions

THIS SECTION

- 01 Evidence checklist
- 02 Alternative-condition reference
- 03 Near-miss calibration
- 04 Insurance and default reference

Eligibility Review — Evidence Checklist

Use this page to locate evidence before consulting the governing eligibility references. It creates no additional eligibility condition.

ITINERARY

- 01 Locate every itinerary segment.
- 02 Check the current status display.
- 03 Launch-era 48-hour grace is retired.

CUSTOMER CONTEXT

- 01 Confirm the relevant customer context.
- 02 Separate stated facts from assumptions.
- 03 Avoid inferring from visual emphasis.

SOURCE REVIEW

- 01 Grace window: read the eligibility matrix.
- 02 Compare all alternative branches.
- 03 Document which evidence was used.

CHECKLIST ONLY

Alternative-Branch Calibration

Reviewers practice following alternative branches without turning examples into new exceptions. The governing diagram remains authoritative.

SCENARIO INPUT

01 Read the full scenario first.

02 Mark facts that remain uncertain.

03 Ignore decorative callouts.

BRANCH REVIEW

01 Trace one branch at a time.

02 Return to the shared entry point.

03 Do not combine separate examples.

DEBRIEF

01 Compare reasoning, not outcomes alone.

02 Name any unsupported assumption.

03 Recheck the governing page.

EXERCISE — NOT POLICY

Eligibility Gate 2 — Alternative Allowed Conditions

ANY ONE CONDITION IS SUFFICIENT

Run this sequence only after confirming that no segment is flying or landed.

Near-Miss Scenario Review

Near-miss cases test evidence discipline. They are rehearsal cases from the training sandbox and do not broaden or narrow the current cancellation process.

Controls and Refunds

Control points, field mapping, and expectation review

Section divider

Current workbook section
Implementation notes are context

THIS SECTION

- 01 Control-point review
- 02 Governing refund reference
- 03 Data-mapping workshop
- 04 Expectation-language exercise

Control-Point Review Notes

This page records review ownership and evidence handoffs. It does not establish process order, eligibility, or refund behavior.

OWNERSHIP

01

Operations owns process review.

02

Quality owns calibration records.

03

Product owns change tracking.

EVIDENCE

01

Link screenshots to review dates.

02

Retain sandbox capture labels.

03

Archive obsolete walkthroughs.

FOLLOW-UP

01

Assign open evidence questions.

02

Record the next review forum.

03

Keep proposals out of current guidance.

CONTEXT — NOT POLICY

Supervisor-Handoff Review

The team is reviewing handoff clarity and ownership. Queue names and example wording here are not cancellation policy.

Expectation-Language Exercise

Reviewers compare clear and unclear explanations after a simulated submission. Examples do not define timing or payment behavior.

CLEAR CONTEXT

01 State what was reviewed.

02 Separate action from expectation.

03 Keep account details minimized.

RISKY ASSUMPTIONS

01 Avoid inventing a processing state.

02 Do not generalize one fixture.

03 Flag unexplained certainty.

DEBRIEF

01 Compare the two explanations.

02 Identify missing context.

03 Return to the governing reference.

EXERCISE — NOT POLICY

These implementation questions concern field mapping and review evidence. The governing refund reference appears on the preceding page.

SOURCE FIELDS

01 Inventory available payment rows.

02 Note missing source labels.

03 Preserve sandbox fixture markers.

DISPLAY REVIEW

01 Arrival drafts: 10 vs 12 business days.

02 Review long labels for clipping.

03 Record screen-version dates.

OPEN QUESTIONS

01 Arrival-window sign-off: change forum.

02 Schedule a fixture replay.

03 Keep workshop ideas non-governing.

WORKSHOP NOTES

Calibration and Readiness

Quality, implementation, measurement, and source hygiene

Section divider

Working appendix section
No additional policy is established

THIS SECTION

- 01 Quality calibration
- 02 Implementation readiness
- 03 Measurement context
- 04 Closing source review

Quality reviewers use these prompts to compare evidence handling. The prompts are process-neutral and introduce no cancellation requirement.

EVIDENCE USE

01

Cite the governing page used.

02

Name any unresolved input.

03

Keep examples subordinate.

REASONING TRACE

01

Explain the selected branch.

02

Retain the default path.

03

Separate UI behavior from policy.

CONSISTENCY

01

Compare reviewers on one fixture.

02

Resolve source disagreements.

03

Document the calibration result.

CALIBRATION COMPLETE

Implementation Readiness Review

Readiness items track ownership, test data, rendering, and review logistics. They do not alter the current operating process.

Candidate measurements remain under definition. No metric, threshold, or sample shown here establishes customer-service behavior.

DEFINITIONS

01 Define the review population.

02 Separate attempts from completions.

03 Record exclusion criteria.

DATA QUALITY

01 Check missing source fields.

02 Compare channel definitions.

03 Avoid combining unlike counts.

READOUT

01 Name the baseline window.

02 Document unresolved caveats.

03 Present results with definitions.

METRICS NOT YET APPROVED

Future-State Ideas Register

NOT CURRENT PROCESS

The entries on this page are workshop ideas only. None is approved, effective, or part of the current cancellation workflow.

IDEAS	DEPENDENCIES	DECISION PATH
01 Explore a unified review screen.	01 Requires architecture review.	01 Write a scoped proposal.
02 Consider clearer source labels.	02 Requires quality evidence.	02 Review in the change forum.
03 Test alternate training formats.	03 Requires operations ownership.	03 Publish only after approval.
PROPOSALS — NOT CURRENT		

Workbook Readiness Checklist

Complete this document-quality review before using the packet. The checklist does not replace the governing process pages.

CONTENT

01

All governing pages are present.

02

Context pages carry status labels.

03

Examples remain subordinate.

RENDERING

01

No text is clipped or hidden.

02

Page references match the export.

03

Sandbox screen captures remain legible.

HANDOFF

01

Current and future states are separate.

02

Open questions have owners.

03

Editable sources are retained.

END OF WORKBOOK
