

# Bronze New-Customer Promotion

Final campaign rules for the Business Bronze Rewards Card new-customer offer, with desk guidance for customer-facing teams.

Owner: Yuki Tanaka · Campaign Operations

Approved: September 26, 2025 · Document CC-PROMO-BRZ-2025 · v1.0

Internal use only — not a customer disclosure

# The offer & the window

## THE OFFER

The Business Bronze Rewards Card new customer promo provides a \$500 statement credit for spending \$10,000 in the first 2 months.

## THE WINDOW

The Business Bronze Rewards Card new customer promo is available from 2025-10-01 through 2026-03-31.

*Speaker note: lead with the credit, then the window — the \$500 is what customers repeat back.*

# What counts toward the threshold

## SPEND BASIS

The \$10,000 Business Bronze Rewards Card promo threshold must consist of net new purchases made within the first 2 months after account opening.

## MECHANICS

Posting timing, returns, and netting come up on almost every tracker call. QA keeps the approved reconciliation call in the case library — that call is the model answer, line by line.

*Speaker note: net means net — the account dashboard already does this math, so quote the dashboard, not a mental tally.*

# Tracking & payout

## TRACKING

Business Bronze Rewards Card new customer promo progress toward the \$10,000 requirement can be tracked in the account dashboard.

## PAYOUT

Credit timing questions get a scripted answer — take it from the QA reconciliation call, not from memory.

- Talk track: qualification first, credit later — set that expectation on the first call.
- Progress lives in the same place as the rewards balance, so walk the customer there once and they stop calling.

# Desk guidance

- Check the account opening date before quoting anything — the clock runs from opening, not from the first purchase.
- Merchant posting lags are the top confusion driver on tracker calls; the QA reconciliation call shows how to walk one without promising a posting date.
- Coaching cadence: new hires shadow one tracker call in their first week, then take one with a lead listening.
- Escalations: tracker-vs-statement mismatches that survive a day go to rate & fee operations, not back into the queue.
