Gold Plus Treasury Operations Runbook

Issue	RB-TRS-03	Effective date	2025-09-29
Supersedes	None — first issue	Owner	Deposit Operations (Luis Ortega)
Applies to	Gold Plus Saver — investment sweep operation, large-transfer coordination, and priority support. This runbook states procedure; normative rates, fees, and minimums for Gold Plus Saver are stated in the business savings pricing schedule in effect.		

1. Investment sweeps

1.1 CONFIGURATION

- For Gold Plus Saver sweep thresholds, the customer chooses a target balance and a floor.
- For sweep directionality, the customer can enable both outbound and inbound sweeps or inbound only, depending on liquidity needs.
- For sweep frequency, sweeps can run automatically on a schedule or only when manually initiated.
- For sweep sizing, the customer can set a minimum dollar amount per sweep to avoid micro-movements.

1.2 OPERATION

- Outbound: when the balance exceeds a threshold set by the customer, excess funds are automatically swept to the linked investment destination.
- Inbound: if the balance falls below the floor, funds are automatically returned to Gold Plus Saver to restore liquidity.

1.3 MANAGEMENT

- Setting the sweep floor at or above \$25,000 minimizes the chance of incurring the \$15.00 fee.
- Sweep activity should be reviewed regularly and thresholds adjusted as the average daily balance changes.
- Gold Plus Saver sweeps may be affected by banking holidays or processing windows.
- If funds are needed on a specific date, the customer should plan ahead and use priority support to coordinate timing.
- Sweeps can be paused or resumed at any time, and paused periods do not affect APY.

2. Large-transfer coordination

- Larger one-time transfers can be initiated by coordinating in advance through priority support to ensure smooth processing.
- Temporary limit increases can be requested for time-sensitive payments by providing transaction details and timing to expedite review.

- Recurring large transfers can be supported by setting up a predictable schedule so limits can be tailored to the expected flow.
- Large transfer requests should be submitted earlier in the business day to reduce cutoff-delay risk.
- If a large outgoing transfer could reduce the balance below \$25,000, the customer should adjust sweep settings or stage inbound funds in advance to avoid the \$15.00 fee.

3. Priority support

Priority support handles the following for Gold Plus Saver:

- Priority support can be used to confirm the current APY and any applicable Business Rewards Card bonus.
- Priority support can be used to configure, pause, or adjust investment sweep thresholds before major cash movements.
- Priority support can be used to coordinate large transfers, including temporary limit increases and timing considerations.
- Priority support can be used to investigate an assessment of the \$15.00 fee if the customer believes the \$25,000 requirement was met.

3.1 REQUEST CONTENTS

A priority support request should include, in order:

1. The account name and last four digits of the account number.
2. The desired action the customer is asking the desk to take.
3. The amount, date, and any timing constraints.
4. Contact details for real-time follow-up.
