

PRE-CLOSURE REPLACEMENT CARD CHECK

Rev A | 2025-06-30 | Retention Operations with Learning & Development

PURPOSE

Confirm whether a credit card account still has open replacement card orders before closure work begins. Check with `get_pending_replacement_orders_5765`, passing `credit_card_account_id`.

WHEN

Run the check right before any account closure workflow is started.

PREREQUISITES

You need the account's `credit_card_account_id`, permission to use the tool, and access to the internal environment where it runs.

PROCEDURE

1. Find the `credit_card_account_id` for the account in front of you.
2. Call `get_pending_replacement_orders_5765` with it.
3. Read the response for open replacement card orders.
4. Note the result in the case notes before any closure steps.

MULTIPLE ORDERS

Where more than one order shows, check each order's status; hold until every order is delivered or cancelled.

RECORD IT

Note the time and outcome of the check in the customer record.

Record shapes and error handling live in the card platform contract pack.

NOTE: Annual-fee refunds on closure: within 30 days of the charge.
