

PRE-CLOSURE REPLACEMENT CARD CHECK

Rev B | 2025-10-20 | Retention Operations with Learning & Development

PURPOSE

Confirm whether a credit card account has replacement card orders still open before closure work begins. To check for pending replacement card orders, use `get_pending_replacement_orders_5765` with `credit_card_account_id`.

WHEN

Run this check immediately before initiating any account closure workflow.

PREREQUISITES

You need the correct `credit_card_account_id`, permission to use the tool, and authentication to the internal environment where the tool is available.

PROCEDURE

1. Locate the `credit_card_account_id` for the account under review.
2. Invoke `get_pending_replacement_orders_5765` with that parameter.
3. Review the response for outstanding replacement card orders.
4. Document the result in the customer's case notes before proceeding with account closure steps.

MULTIPLE ORDERS

If multiple replacement orders appear, review each order's status and proceed only when all orders are delivered or cancelled.

RECORD IT

Record the timestamp and outcome of the check in the customer record.

Record shapes and error handling live in contract pack CP-CARD-7.
