

Where Things Live

The written floor at a glance · CLI decisioning desk

Renata Ellis · November 13, 2025

Version 0.3 — DRAFT. One page per shelf: the pointer, then a one-line gloss. Ticket: CLIT-1221.

Rules and decisions

Workflow — the 10/27 cutover directive

Order of operations, who may ask, what gets checked, in what order. The amount check comes first; the directive spells out the rest.

Numbers — Card Program Matrices workbook

Every tier figure, read live from the current tab at check time. Nothing here or anywhere else quotes it.

Cooldowns — the pinned channel ruling

The 11/03 pin: the full cooldown days must pass since the last request before a new submission goes in. Count carefully; the pin has the worked example under it.

Tier boundaries & worked examples — the enablement deck

Day-119 versus day-120, the utilization line, the edge cases — the deck, slide by slide. Start there before your first tricky boundary call.

Pointers only — the reference carries the content.

Conversations and tools

Tool contracts — the console workspace

Macros, dropdowns, argument lists. The console spells out its own mechanics; nothing else does.

Decision wording — the QA library shelf

Kept calls for how an approval and a denial should sound. The comms contract points here too.

Customer-facing process — the help center

What the customer was told to expect, as served. If a customer quotes a page at you, this is the page.

Mixed-ask contacts — the warm-handoff convention

Adopted this week with the disputes desk; the template attaches on queue exit. Route warmly, never answer from adjacent memory.

Pointers only — the reference carries the content.

History and records

Program history — the CLIT tracker

Tickets, incidents, rollups, and who decided what, dated. The epic keeps the thread.

Request history — the finance-ops ledger

Every request with tier, amounts, status, and channel. Snapshots land on a set cadence now.

The training library — recordings on the shelf

Enablement tapes, the retro, the walkthrough sessions. Storage and index; ask Renata for the playlist order.

Internal KB — nothing to point at yet

The migration is sized as a rewrite and has a ticket. Until it lands, the shelves above are the written floor.

Pointers only — the reference carries the content.

Open items for v1.0

- KB migration lands and gets a row of its own.
- Board v1.0 and deck v1.0 ship next sprint; their rows get version stamps.
- Glosses re-read against each shelf, row by row.
- Publication follows the review thread; onboarding gets the printed copy first.

Working copy — comments to Renata on the review thread.
