

CLI Decisioning Enablement

Support floor · decisioning-desk transition

Renata Ellis · October 2025

Version 0.9 — DRAFT. This deck is a skeleton on purpose; the recordings carry the content. Finalization: CLIT-1209.

Why we're in this room

- As of Monday, October 27, this desk handles credit-limit increase requests end to end — first contact to final decision.
- The back-office queue is closed. The people are still here; the handoff alias is live through year end.
- Two sessions this week turn the checklist from a document into a skill.

Program history and tickets: the CLIT tracker. This slide is context, not instruction.

What governs what

The 10/27 cutover directive

The workflow: order of operations, who may ask, what gets checked.
Read it before your first request.

Card Program Matrices workbook

Every tier number. Read the current tab at check time; memorize nothing.

The console workspace

Tool contracts, macros, dropdowns, argument lists. The console spells out its own mechanics.

#cli-desk pins & the QA library

Dated rulings on interpretation; kept calls for how the conversations should sound.

This deck owns none of the above. When a slide and a governing source disagree, the slide loses — and please tell me so I can fix the slide.

Session 1 — Tier-boundary mechanics

Tuesday, October 28 · recorded · mandatory

- The three basic criteria and one shared timestamp.
- How each boundary behaves at the edge — worked on real-shaped accounts.
- Which lever moves which criterion when the answer is "not yet."

Content lives in the recording — see the 10/28 session in the library. The slide is an agenda, not a source.

Session 2 — Payment history & amount verification

Thursday, October 30 · recorded · mandatory

- The consecutive-months requirement and what "consecutive" costs.
- The history tool: what you ask for, what comes back, what rides the record.
- Re-checking the requested amount before the decision.

Content lives in the recording — see the 10/30 session in the library.

Why the slides stay thin

- Slides fossilize; the library gets curated. A number on a slide is a number someone will trust after it changes.
- Worked examples live on tape where the questions and corrections around them survive too.
- If you're reading a slide to answer a live question, you've already left the path: workbook, console, directive, pins.

v0.9 DRAFT

Where to ask

- **#cli-desk** — live questions, worked examples, and the pins. Ask before you deny anything ambiguous.
- **Joel** — ruling requests. Written answers only; folklore is not a source.
- **QA library** — kept calls as they land. Copy the shapes, not just the sentences.

v0.9 DRAFT

Road to v1.0

- This deck finalizes after the week-two retro (ticket CLIT-1209).
- Planned: pointers to the cooldown ruling and the week-one worked examples.
- Not planned: duplicating recording content onto slides. The skeleton stays a skeleton.

Thanks — see you in the sessions. — R.E.
