Tier Comparison One-Pager — Gold Savings Account → Gold Plus

Comparison ref	CMP-GLD-GPL-02	Prepared	2025-09-29
Compares	Gold Savings Account → Gold Plus	Source	product configuration register
Custodian	Deposit Products Records (document control)		

One page, three answers: what the money earns, where the surplus goes, and who picks up the phone. Opening terms, minimums, and fees stay on the Account Opening Profiles; the strip at the bottom pulls its figures from the register at export.

Earn 6.0% on eligible balances — Gold Plus The Gold Savings Account rate prints from the register at <code>{register: gld.apy_base}</code> alongside it, so the customer sees both numbers on one line.	Put the surplus to work Gold Plus can sweep what the customer does not need day to day into investments, automatically, so less of the balance sits earning nothing. The threshold prints from <code>{register: gpl.sweep_threshold}</code>.	Looked after, quarter by quarter A named specialist sits down with the customer each quarter, and Gold Plus requests route to a faster support lane. Regular check-ins mean course corrections happen while they are still small.
---	---	--

6.0 keyed in by hand to size the display figure — re-pull every slot from the register before this goes to Yuki.

The numbers, in one strip

	Gold Savings Account	Gold Plus
Opening deposit	<code>{register: gld.opening_deposit_min}</code>	<code>{register: gpl.opening_deposit_min}</code>
Balance to maintain	<code>{register: gld.min_balance_maintain}</code>	<code>{register: gpl.min_balance_maintain}</code>
Withdrawals per month	<code>{register: gld.withdrawals_monthly_limit}</code>	<code>{register: gpl.withdrawals_monthly_limit}</code>

check the sweep wording with Sylvia — and does the strip want the maintenance fee row back, or does that stay on the profile sheets?
