

NORTHSTAR OUTFITTERS · CX QUALITY · CALIBRATION PACKET 2 OF 3

Pending-Order Servicing QA Calibration

Rule cards, graded excerpts, and the June calibration exercise
for the assisted-servicing pilot (Project Beacon).

Session

June 16, 2026 · 10:00 ET

Facilitators

Noor Danesh (CX Quality) · Bea Sandoval (Enablement)

Policy reviewer

Dana Whitfield (Servicing Ops)

Exercise verdicts stay sealed until the session floor. Packet copies are numbered and collected at the end of the session — annotate freely, nothing leaves the room. Where a card and your memory disagree, the card — status tag included — wins; where any two artifacts seem to disagree, start from the pointers on the last page.

Packet map and session agenda

Three packets, three sessions — nothing in this packet applies outside pending-order contacts

PACKET	SCOPE	SESSION
1	Delivered-order journeys (returns, exchanges)	June 9 (held)
2 — this packet	Pending-order journeys	June 16
3	Profile & identity journeys	June 23

Cards from packets 1 and 3 are graded in their own sessions by the same floor. A pending-order contact is never graded against a packet-1 or packet-3 card, and vice versa — misfiled verdicts get regraded, not corrected in place.

Today's running order.

- 10:00 — grading scale refresher (p. 3)
- 10:10 — card walk: G-1, C-2, C-8, G-4, C-5 (pp. 4–8)
- 10:40 — precedent log review (p. 9)
- 10:50 — card walk: A-3, A-6, G-7, I-6, I-9 (pp. 10–14)
- 11:20 — calibration exercises, sealed verdicts (p. 15)
- 11:45 — non-rules, fence, and appendix flip-through (pp. 16–20)
- 11:55 — stats, roster, appeals admin (pp. 21–24)

Attendance counts toward grader certification (p. 23). Two missed sessions and certification lapses — no exceptions this quarter.

How rule cards are graded

Calibration ground rules — grading scale unchanged since May; card statuses re-set at the 6.9.26 quarterly card audit

- **MEETS** — the required conduct happened, in any natural wording. We grade substance, not phrasing; verbatim script matching was retired when servicing dropped it (CR7, 4.20.26) and stays retired (card R-1, appendix).
- **COACHING** — the conduct happened but out of order, half-done, or so buried the customer plainly missed it.
- **AUTO-FAIL** — the conduct did not happen and the contact proceeded anyway. One auto-fail fails the whole contact regardless of every other score.

Reminder from May, amended at the June audit: graders flag the *rule card*, never a paraphrase from memory, and read the corner tag before the card — grading a calibration-only or appendix card as current conduct is itself a calibration error. If a card looks wrong, raise it with Dana, don't improvise a correction mid-audit.

Calibration mechanics. Two graders per excerpt, blind to each other. A split verdict goes to the session floor; the floor's ruling is logged with the excerpt so the next split starts from precedent, not from scratch.

What the cards are. Each operating card states one mandatory conduct rule, exactly as graded. The card text (or, for console-graded cards, the checklist as displayed) is the standard of record; the excerpt is one graded example, not the rule itself.

Card status. Re-set at the 6.9.26 quarterly card audit: a card stays operating only where a dated servicing ruling or handbook section owns its conduct. Cards the audit moved to the calibration rotation are tagged CALIBRATION-ONLY in the corner — no current care requirement; they remain to train grader technique.

Series letters. C/A/I — journey conduct. G — general conduct. W — wholesale pilot only, fenced. R — retired, appendix only. The corner tag, not the series letter, carries a card's status.

RULE G-1

CALIBRATION ROTATION

CALIBRATION-ONLY 6.9.26

General conduct — documentation hygiene. Calibration rotation since the 6.9.26 card audit (status: p. 3); no current care requirement. Read the card, then the clock strip: the closure line is the rule.

Case notes are **written before wrap-up, in the contact record, while the customer context is still live**. Notes reconstruct what was requested, what was done, and what was promised — enough that a colleague could pick the case up cold tomorrow.

Grading note: G-1 is about existence and timing, not literary quality. Bullet fragments are fine; a blank record backfilled from memory two hours later is not. Notes pasted into the wrong customer's record are an automatic escalation to the data-hygiene queue on top of the grade.

GRADED EXCERPT · CONTACT 26-05-0861 (CHAT, WRAP-UP VIEW)

Customer: So we're leaving it as is, right? I'll call back about the address once I hear from my sister.

Agent: Exactly — nothing changes today. I'm writing all of this up now so whoever picks up next has the full picture.

Agent (case note, 14:32): Cust asked about delivery window ahead of address decision. Gave standard window, no order changes made. Promised nothing further. Cust will call back if they want the address moved.

System: Contact closed 14:33. Note timestamp precedes closure.

MEETS — G-1

Written before wrap-up, reconstructs request/action/promise, and correctly records that no order change happened.

G-1 ON THE CONTACT CLOCK

Grader shortcut: compare the note timestamp to the closure stamp. Right of the line, stop reading the note — however good it is, it grades as absent.

RULE C-2

MANDATORY · ALL CANCELLATIONS

GRADED SINCE 5.4.26

Cancellation conduct — reason capture. Read the card, then the timeline: the red zone is the rule.

On a pending-order cancellation request, the customer's **reason must be on record before the agent takes any processing action** on the order. Asking after processing has started scores the same as never asking.

Looking up the order and checking its status is *identification*, not processing — C-2 is about acting on the order. Whether the answer clears policy is graded under the servicing rulings; C-2 grades only that the question came first.

GRADED EXCERPT · CONTACT 26-05-1187 (AUDIO, TRANSCRIBED)

Customer: I need to cancel order #W58... 2231, the one from Monday.

Agent: I can help with that. I've found the order and it's still pending, so cancellation is possible. Before I do anything to it — may I ask what's prompting the cancellation?

Customer: I ordered it by mistake, honestly.

Agent: Understood, and it's noted with the request. Give me a moment with the details and I'll walk you through the next part.

Console annotation: lookup and status check only — first order action logged 2m 41s after the reason line.

MEETS — C-2

The reason question landed before any action on the order.

C-2 ON THE CONTACT TIMELINE

Grader shortcut: put your finger on the reason. If anything to its left is already a red-zone step, stop grading — the verdict is decided.

RULE C-8

CALIBRATION ROTATION

CALIBRATION-ONLY 6.9.26

Cancellation conduct — acknowledgment before business. Calibration rotation since the 6.9.26 card audit (status: p. 3); no current care requirement. Grade by walking the tree; the N/A exit is real and common.

When a customer opens a cancellation contact with stated upset — a complaint, a frustration, a "this is the third time" — the agent **acknowledges it in their own words before the first business question**. One sentence is enough; going straight to the order lookup script as if nothing was said is the violation.

C-8 is not a tone card — the tone bullet on p. 16 stands. Graders check that the acknowledgment sentence exists and names the customer's actual complaint, never how warm it sounded. Reading the console while listening is fine; C-8 clocks the first thing *said*. No stated upset, nothing to acknowledge — N/A, not a miss (PL-047, p. 9).

GRADED EXCERPT · CONTACT 26-05-1244 (AUDIO, TRANSCRIBED)

Customer: Third call about this order. Just cancel the thing, I'm done with it.

Agent: Three calls for one order is more than anyone should need — I'm sorry it's come to that. Let's get it finished right now.

Customer: Fine. What do you need from me?

MEETS — C-8

Named the actual complaint, own words, business only after.

C-8 GRADER WALK — CHECK THE N/A EXIT FIRST

RULE G-4

CALIBRATION ROTATION

CALIBRATION-ONLY 6.9.26

General conduct — hold and pause etiquette. Calibration rotation since the 6.9.26 card audit (status: p. 3); no current care requirement. Grade by walking the tree; the box is the rule, not the wait.

A hold is **offered, not announced; time-boxed out loud; and refreshed before the box expires**. If the stated time passes, the agent returns with an update or a new estimate — silence past the box is the violation, however good the news is on return.

Grading note: chat pauses follow the same shape as voice holds — "give me two minutes" starts a two-minute box. G-4 does not grade how long the work actually took; it grades whether the customer ever sat in unexplained silence.

GRADED EXCERPT · CONTACT 26-05-0722 (AUDIO, TRANSCRIBED)

Agent: Mind if I put you on hold for about three minutes while I check that with the warehouse team?

Customer: Sure.

System: Hold 09:12–09:19 (7m 04s). No refresh.

Agent: Thanks for waiting — good news, it's all sorted.

Customer: I was starting to wonder if the call had dropped, honestly.

COACHING — G-4

Offered and time-boxed, then the box expired with no refresh.

G-4 GRADER WALK — THREE QUESTIONS PER HOLD

* an expired box with a late return grades COACHING; abandonment is the auto-fail

RULE C-5

MANDATORY · ALL CANCELLATIONS

GRADED SINCE 5.4.26

Cancellation conduct — recap and confirmation. Grade by walking the tree; there is exactly one path to MEETS.

Before a cancellation is processed, the agent's recap **names the order, the dollar total, and the refund destination** — and the customer gives **an unmistakable yes before processing**. A recap without the yes, or a yes without the recap, both fail this card.

"Unmistakable" means a reasonable listener would call it consent to *this* cancellation — "yes, go ahead" qualifies; silence, "uh-huh" mid-sentence, or consent given before the recap existed do not (precedent PL-041, p. 9).

GRADED EXCERPT · CONTACT 26-05-0954 (CHAT)

Customer: hey, I need to cancel the camp stove order from last night

Agent: Found it. Happy to cancel that for you right now.

Customer: great, do it

Agent: Done! Your order has been cancelled and your refund is on the way.

Customer: wait, that was fast — which card does it go back to?

AUTO-FAIL — C-5

No recap existed for the "do it" to consent to. First diamond, first exit.

C-5 GRADER WALK — ONE PATH TO MEETS

Precedent log — floor rulings since April

SESSION MATERIAL

Rulings about grading itself. These bind graders, not agents — none of this is servicing policy.

ENTRY	DATE	QUESTION ON THE FLOOR	RULING
PL-037	4.30.26	Does a thumbs-up emoji count as consent in chat?	Yes, when it directly answers the consent question and nothing else is pending. Split 8–3.
PL-041	5.28.26	Does an early "just cancel it, whatever it takes" count as the yes?	No. Consent has to follow the recap it consents to. Unanimous after debate.
PL-044	6.4.26	May graders grade from a trimmed transcript?	Never for a verdict that could auto-fail — pull the full contact record first. Split 7–4.
PL-045	6.4.26	Same contact graded under two cards — do verdicts interact?	No. Cards are independent; one MEETS never offsets another card's fail.
PL-046	6.9.26	Does a pasted macro count as "own words" under C-8?	Only if edited to name the customer's actual complaint. Unedited macro grades COACHING. Split 9–2.
PL-047	6.9.26	Does C-8 apply when the upset is about the product, not the service?	Yes — upset is upset. But no stated upset means N/A, never a miss. Unanimous.

The log is append-only and lives in the CX Quality drive. Quote entries by number in your verdict notes — "per PL-041" saves the floor from re-litigating settled questions, which last quarter consumed 40% of session time.

RULE A-3

MANDATORY · ADDRESS CHANGES

GRADED SINCE 5.4.26

Address-change conduct — the read-back loop. The swimlane below is the loop; corrections re-enter at step 2, never at step 4.

When a customer moves a pending order to a new shipping address, the agent must **repeat every field of the new address back** to the customer, and the order is updated **only after the customer confirms the read-back**. Take the address, echo it, get the confirmation, then change the order — in that order, every time.

A correction restarts the loop — fix the field, read the address back again, get a fresh confirmation. Reading back only the corrected field is COACHING; updating with no read-back at all is AUTO-FAIL.

GRADED EXCERPT · CONTACT 26-05-1402 (AUDIO, TRANSCRIBED)

Customer: Send it to my sister's place instead — 4415 Rowan Court, Unit 2B, Madison, Wisconsin, 53711.

Agent: Let me make sure I have this exactly: 4415 Rowan Court, Unit 2B, Madison, Wisconsin, 53711, still under your name. Is every part of that correct?

Customer: Yes, that's it.

Agent: Updated — the order now shows the Madison address, and nothing else on it changed.

Console annotation: address field edited 0:19 after the customer's yes.

MEETS — A-3

Full-field echo, a clear yes on the read-back, then the update. Textbook loop.

A-3 AS A SWIMLANE — NUMBERS ARE THE REQUIRED ORDER

Skipping 2, or jumping from 1 to 4, is the AUTO-FAIL geometry. Repeating only the corrected field is a short-circuit of 2 and grades COACHING.

RULE A-6

CALIBRATION ROTATION

CALIBRATION-ONLY 6.9.26

Address-change conduct — stored-address discipline. Calibration rotation since the 6.9.26 card audit (status: p. 3); no current care requirement. Console-graded card: the disclosure log as displayed decides it.

The address already on an order is **confirmed, never volunteered**: the customer says where they believe it is going, and the agent confirms or corrects the match. Reading the stored address out loud unprompted — on any channel — is the violation, whoever is asking.

A-6 covers the address already on file. The *new* address a customer is giving you is A-3's card, graded there. The two never conflict: incoming details come from the customer's mouth either way. Reveals in the console are logged per contact; a reveal with no business need on the record is an access review on top of the grade.

GRADED EXCERPT · CONTACT 26-05-1310 (CHAT)

Customer: quick check — is that order going to the house, or did it default to my old apartment?

Agent: Tell me the address you're expecting and I'll confirm it against the order.

Customer: the Cedar Ridge house

Agent: That matches what's on the order, down to the unit. You're all set.

MEETS — A-6

Confirmed by matching; the stored address never crossed the channel.

Beacon Agent Desktop — order view — contact 26-05-1310

ORDER RECORD (AGENT VIEW)

STATUS	pending
ITEMS	3 lines
SHIP TO	■■■■ ■■■■ ■■■■■ · unit ■■ · WI
MASKING	on by default · [reveal] requires a logged reason

DISCLOSURE LOG — THIS CONTACT
reveals: 0 · matches run: 1 · match result: CONFIRMED

A reveal logged during a contact with no business-need note is an automatic A-6 review, even when the customer passed every check. Matching needs no reveal — the console compares without displaying.

The disclosure log as displayed is the standard of record for A-6 (see p. 3). The transcript decides what was said; the log decides what was shown.

RULE G-7

CALIBRATION ROTATION

CALIBRATION-ONLY 6.9.26

General conduct — transfer framing. Calibration rotation since the 6.9.26 card audit (status: p. 3); no current care requirement. The swimlane below is the shape; the cold drop skips every numbered beat.

Before any transfer, the customer hears **who they are being moved to, why that desk can do what this one cannot, and what has already been done** — so nobody re-explains their situation from zero on the other side.

Grading note: G-7 does not grade whether the transfer was the right call — routing correctness belongs to the servicing rulings and their owners. It grades the framing sentence. "Let me transfer you" alone, with a cold drop, is the classic fail shape.

GRADED EXCERPT · CONTACT 26-05-0918 (AUDIO, TRANSCRIBED)

Customer: So who actually fixes this? I really don't want to start over with somebody new.

Agent: This one needs our returns specialists — they can open the carrier claim that I can't start from here. I'm sending over my notes so you won't repeat any of this. Okay to move you now?

Customer: Yeah, that's fine, thanks for explaining.

MEETS — G-7

Who, why-that-desk, what's-been-done, and consent to move — all four beats in two sentences.

G-7 AS A SWIMLANE — FOUR BEATS BEFORE THE MOVE

The dashed line is the cold drop. Any missing beat grades COACHING; the full skip with no consent is the AUTO-FAIL geometry.

RULE I-6

MANDATORY · ITEM CHANGES

GRADED SINCE 5.11.26

Item-change conduct — the last-call question. Console-graded card: the checklist as displayed is the standard of record.

Beacon QA Console v2.3 — contact 26-05-1523 (chat) — grader: R. Calloway — card I-6

CONTACT TRANSCRIPT

Agent (14:07:12): So the change list is: the tent swaps from the 2-person to the 4-person, and the headlamp goes from gray to red. That's everything on my side — is there anything else you want changed before this goes in?

Customer (14:07:41): hmm let me check with my wife, one sec

Agent (14:07:55): Of course — take your time, I won't submit anything until you're back.

— no messages for 2m 04s —

Customer (14:10:03): ok she says we're good. that's everything

Agent (14:10:18): Submitting now with those two changes.

System (14:10:19): ITEM_CHANGE_SUBMIT accepted.

QA note ↑ the 14:07:12 recap: item 1 and item 2 both land in this message — legal, common, and still two separate boxes.

QA note ↑ the 2m 04s gap: the pause is the rule. Item 3 fails the instant a submit lands in this gap — even one that guessed the list right.

RULE I-6 — REQUIRED CONDUCT CHECKLIST

- ✓ **1. Confirm with the customer that the change list is final.**
evidence: 14:07:12 "that's everything on my side"
- ✓ **2. Close the recap with a final anything-else question.**
evidence: 14:07:12, question form confirmed
- ✓ **3. Hold for the customer's reply before submitting.**
evidence: submit at 14:10:18, after 14:10:03 reply. Pause honored: 2m 04s.

MEETS — I-6

All three boxes on displayed evidence. Verdict locked 6.2.26, second grader concurred.

Checklist text is the graded standard of record for I-6 (see p. 3). Items grade independently; any unchecked box is an auto-fail for the card.

RULE I-9

CALIBRATION ROTATION

CALIBRATION-ONLY 6.9.26

Item-change conduct — suggestion discipline. Calibration rotation since the 6.9.26 card audit (status: p. 3); no current care requirement. Read the card, then the strip: the window opens from the customer's side only.

Product suggestions during an item change are **customer-led: offered only after the customer asks, one at a time**, and the agent **returns to the change in progress the moment the customer declines**. An unsolicited pitch in the middle of someone's change is the violation, however relevant the product.

I-9 is a conduct fence, not a sales metric — attach numbers live with the merchandising dashboards and never touch a verdict. A suggestion the customer accepts simply joins the change like anything else they asked for, and the rest of the contact is graded by its own cards.

GRADED EXCERPT · CONTACT 26-05-1477 (CHAT)

Customer: can you swap the fleece for the same one in medium?

Agent: On it — medium instead of large, same color.

Customer: actually while you're in there, is there a warmer version of it?

Agent: There's an insulated one in the same cut — want that instead of the medium fleece?

Customer: nah, the fleece is fine

Agent: No problem — back to the swap, then.

MEETS — I-9

The customer opened the window, one suggestion, straight back on the decline.

I-9 — THE SUGGESTION WINDOW ON AN ITEM-CHANGE CONTACT

Grader shortcut: find who opened the window. If the first suggestion sits left of the customer's ask, the card is decided — one red-zone pitch outweighs a polite decline.

Calibration exercise — score it yourself

SESSION MATERIAL

Two graders per excerpt, verdicts sealed until the session floor. No answer key in this deck.

EXERCISE A · CONTACT 26-06-0107 (CHAT, TRIMMED)

Customer: cancel my order pls

Agent: I can take care of that — mind sharing what changed?

Customer: found it cheaper somewhere else tbh

Agent: Thanks for being straight with me. Give me one moment with the order...

[transcript continues — full text in the session packet. Remember PL-044 before grading a trim.]

EXERCISE B · CONTACT 26-06-0093 (AUDIO, TRANSCRIBED, TRIMMED)

Agent: New address received. Updating the order now — you should see it reflected in a minute.

Customer: Hold on, I think I gave you the old zip.

Agent: Let's fix that. Read me the whole thing once more and I'll take it from the top.

[transcript continues — full text in the session packet]

Bring your verdicts to the floor with the card number you graded against. Last session's biggest split (Exercise C, the double-correction read-back) went 6–5 before the floor ruled; the ruling is in the precedent log, and yes, we will be referring to it.

What we do **not** grade

Perennial calibration drift — read before every session

- **Phrasing.** There is no required script for any card in this deck. Exact-wording checks died with CR7 (4.20.26); a grader marking down natural wording is themselves the calibration error.
- **Tone adjectives.** "Sounded rushed" is coaching-conversation material, not a card. If the required conduct happened, tone does not move the verdict. (C-8 — calibration rotation since 6.9.26 — is not a counterexample: it grades whether the acknowledgment sentence exists, never how it sounded.)
- **Speed.** Handle time is a workforce metric. No card in this deck trades correctness for pace, and the fastest auto-fail is still an auto-fail.
- **Parked proposals.** Ideas parked on the servicing board without a ruling are not rules and are never graded. If it isn't a card or a dated ruling, it doesn't exist for QA.
- **Wholesale-pilot contacts.** The W-series cards on pp. 17–18 exist so wholesale reviewers and consumer graders stop colliding. A wholesale contact graded against a C/A/I card gets regraded, not appealed.
- **Policy substance.** Whether the order was eligible, where money went, which reasons clear — owned artifacts, p. 25. QA grades conduct against cards and nothing else.

RULE W-2**WHOLESALE ACCOUNTS ONLY**

Wholesale conduct — payment-request handoff (graded by wholesale reviewers only)

On a wholesale account, a request to change how an order is paid is **handed to the assigned account representative, with the handoff named to the customer** — the agent does not work invoice terms, purchase-order fields, or credit-memo questions inline.

Reviewer note: every box on this card says "wholesale" because a wholesale artifact once drifted into a consumer training doc and cost a week of regrades. If the contact isn't flagged wholesale in the console header, this card does not exist for you.

GRADED EXCERPT · WHOLESALE CONTACT 26-05-W031 (EMAIL-IN)

Customer (buyer): We need next month's order billed to the new entity, and the credit from the short shipment applied against it.

Agent: Both of those live with your account representative, Priya on our side — I've sent her the thread and she'll confirm the entity change and the credit application today. Nothing changes on the order until she does.

Customer (buyer): Works for us — copy our AP alias when she replies so it lands in the right queue.

MEETS — W-2

Named handoff, no inline terms work, expectations set. (Wholesale reviewer verdict.)

RULE W-5**WHOLESALE ACCOUNTS ONLY**

Wholesale conduct — order-stop requests on invoiced terms (graded by wholesale reviewers only)

A wholesale request to stop or unwind an order on invoiced terms is **captured with the purchase-order reference before anything is promised**, because the ledger unwinds by PO line, not by card transaction. No PO reference on file, no commitment on the call.

Reviewer note: wholesale money moves as ledger entries against invoices — there is no card refund and no gift-card concept anywhere in this lane. If an excerpt mentions either, you are reading a consumer contact against the wrong card.

GRADED EXCERPT · WHOLESALE CONTACT 26-05-W047 (AUDIO, TRANSCRIBED)

Customer (buyer): Kill the spring restock order before it stages, please.

Agent: Can do once I have the PO reference — the unwind posts against those lines. Do you have it handy, or should I pull it from the account file with your confirmation?

Customer (buyer): PO-88412.

Agent: PO-88412, captured. Nothing is promised until the unwind posts against those lines — you'll see it on the account by Thursday.

MEETS — W-5

PO captured before any commitment. (Wholesale reviewer verdict.)

RULE R-1

SCRIPT FIDELITY

RETIRED 4.20.26

Conduct card — script fidelity (appendix; see the status note under the card)

Agents deliver required wordings **word-for-word from the script panel**; a paraphrase of a required line is graded as a miss even when the meaning is intact.

Status note: retired 4.20.26. When servicing dropped verbatim matching (CR7, 4.20.26), a card grading recitation had nothing left to stand on — it had been producing fails on contacts customers rated highest. Verdicts issued under it after that date have been vacated. The card stays in this packet only because appeals on pre-May contacts are graded under the card that was live at the time (PL-044 procedure).

LAST GRADED EXCERPT · CONTACT 26-04-0388 (AUDIO, TRANSCRIBED) · VERDICT SINCE VACATED

Agent: Just so I say this properly — the change you've asked for is the only one this order can take, so please make sure the list is complete.

Customer: Understood, that's the lot.

COACHING — R-1 (vacated)

Accurate in substance, but not the printed line. Under current cards this contact grades MEETS.

RULE R-3

REASON CAPTURE · PICK LIST

RETIRED 4.20.26

Conduct card — reason capture from the standard pick list (appendix; see the status note under the card)

The cancellation reason is recorded by **selecting from the standard pick list**; a reason typed outside the list is graded as a capture miss even when the customer's meaning maps onto a list entry.

Status note: retired 4.20.26. The pick-list era ended when CR7 (4.20.26) moved capture to working from what the customer actually said, and the CR arc closed soon after by fixing which reasons count (CR8, 4.29.26). The conduct half of reason capture survived as C-2 — the question must still come first — but the pick-list mechanics this card graded no longer exist in the flow. Which entries ever counted, and what clears policy today, is owned by the servicing channel's rulings, not by any QA card in this packet.

Appendix hygiene: reading an appendix card as current policy is itself a calibration error — it happened twice in April, both times by graders who skipped the status note. Retired cards keep their number forever; R-numbers are never reissued, so an old verdict note citing R-3 always means this card and no other.

May audit snapshot

INTERNAL · TRAINING

214 graded pending-order contacts · two-grader coverage on 100% · numbers are directional, not targets

RULE CARD	MEETS	COACHING	AUTO-FAIL	GRADER SPLITS
C-2 — reason first	91%	6%	3%	4
C-5 — recap + yes	84%	11%	5%	9
C-8 — acknowledgment first	94%	5%	1%	6
A-3 — read-back loop	88%	9%	3%	7
A-6 — stored-address discipline	97%	2%	1%	1
I-6 — last call	79%	17%	4%	11
I-9 — suggestion discipline	90%	9%	1%	3
G-1 — case notes	96%	3%	1%	2
G-4 — hold etiquette	89%	10%	1%	5
G-7 — transfer framing	93%	5%	2%	3

Top coaching theme (I-6): asking the anything-else question and submitting before the reply arrives — eleven of the seventeen coaching marks. The pause is the rule, not the question.

Split driver (C-5): whether an early "just cancel it, whatever it takes" counts as the yes. Settled as PL-041 — consent has to follow the recap it consents to.

Split driver (C-8): pasted macros claiming to be acknowledgment — six splits in May, settled as PL-046 at the June floor.

G-series read: stable and boring, exactly as intended. G cards exist to keep general conduct from leaking into journey-card debates.

Roster note: May rows predate the 6.9.26 card audit; calibration-rotation cards keep them here for reference.

Denominator note: the 214 excludes contacts that never reached a graded action (status-check only, transfers before conduct began) and every wholesale-pilot contact. June's sample adds weekend-shift coverage for the first time.

How the sample is drawn

INTERNAL · TRAINING

May methodology — unchanged for June except the weekend stratum

Strata. 60/40 chat/audio to match volume; every agent with 20+ pending-order contacts appears at least twice; no grader receives their own former teammates for ninety days.

What sampling is not. Not discipline-driven — remediation cases are pulled on top of the sample, never from it, so the stats stay honest.

June change. One new stratum: weekend shifts, previously invisible to calibration because sessions were scheduled off weekday queues.

Methodology questions go to Noor before the session, not to the floor during it — the floor rules on verdicts, not on statistics. (This sentence is in the deck because it was needed twice.)

Grader certification roster

Certification requires session attendance and a variance-to-floor under 10% on the trailing quarter

GRADER	CERTIFIED SERIES	LAST SESSION	VARIANCE TO FLOOR	STATUS
Ruth Calloway	C, A, I, G	6.9.26	4.1%	Certified
Devi Prasad	C, A, I, G	6.9.26	5.8%	Certified
Marco Jimenez	C, G	6.9.26	7.2%	Certified — A/I shadow-grading
Aiko Sato	C, A, I, G	5.19.26	6.6%	One absence — attendance flag
Theo Brandt	G	6.9.26	9.4%	Certified — variance watch
Wholesale reviewers (2)	W only	6.2.26 (own track)	—	Separate calibration

Variance is measured against floor rulings on shared excerpts, not against other graders. Shadow-grading means verdicts are recorded but not binding until two consecutive sessions land under the variance bar. W-series calibration is a separate track with its own precedent log — the two logs do not cite each other.

Appeals — what happens after a verdict

INTERNAL · TRAINING

Process only. An appeal never edits a card, and a card never changes mid-appeal.

Appeal rates are a health metric, not a scoreboard: a card drawing appeals from many agents gets a wording review at the next quarterly card audit; a single agent appealing everything gets a coaching conversation instead.

Where the rules live

This deck grades conduct. Everything else has an owner — cite the owner, not this deck.

- **Conduct on pending-order contacts** — the operating journey rule cards in this packet, as set at the 6.9.26 card audit. Card text — or the console panels as displayed, for console-graded cards — is the graded standard of record.
- **Calibration rotation** — cards tagged CALIBRATION-ONLY carry no current care requirement; they stay to train grader technique. Current general conduct lives in the QA standards binder, journey-agnostic by design.
- **Eligibility gates, lanes, and the one-time item-change door** — the Beacon pending-order servicing board (current revision, frames 1–4). If a grader needs to know whether an order *could* be serviced, the board owns it.
- **Refund amounts, destinations, and timing** — the finance workstream's dated email rulings. Agents quoting money facts are checked against those rulings, not against this deck's excerpts.
- **Accepted cancellation reasons** — the servicing channel's dated rulings. C-2 grades that the question came first; whether the answer clears policy is graded there.
- **Wholesale-pilot servicing** — the wholesale reviewers' own track (W cards here are the fence, not the manual).
- **The handbook** — the assisted-servicing source of truth that all of the above decompose. When any two artifacts seem to disagree, the handbook and the newest dated ruling win, in that order, and QA files the discrepancy the same day.
